

PARTS

McGill AirClean maintains a wide range of parts for the air pollution control systems we have manufactured during the past 40 years. We base our parts inventory on our years of experience servicing and maintaining this equipment, which includes wet and dry electrostatic precipitators, regenerative thermal oxidizers, fabric filters, acid gas control systems, and auxiliary equipment such as evaporative coolers, ductwork, slide gates, dampers, fans, and stacks.

THE RIGHT PART...FAST

Parts have no value if they are not the correct parts. As the original manufacturer, McGill AirClean maintains a complete file of all the original specifications for our customers' system so you can conveniently order parts right from your computer. Our files include all upgrades and improvements that may have been made during the life of the system. Providing the right part will help ensure that the system will operate as originally designed. And, because we ship many parts the same day, you'll experience minimum down time and be able to return to operation quickly.

McGill AirClean maintains an inventory of critical parts. We have ample stocks of the high-demand parts for RTOs, fabric filter and baghouse units, scrubbers, and wet and dry electrostatic precipitators, including the internal and rapping components, insulators, and electrical components for all of our air pollution control equipment. Unlike many parts suppliers, McGill AirClean operates a large, modern manufacturing facility that allows us to custom manufacture parts that may no longer be available.

EMERGENCY REPAIRS

When you need emergency repairs, McGill AirClean can get your system back on line quickly. We can usually have a service engineer on-site within a day to troubleshoot your problem, order needed parts, and then complete the repairs as soon as possible.

WE FEATURE

- Fast, convenient, easy to order parts reference system
- Most current and up-to-date parts

Products depicted were current at the time of publication. As a quality-conscious manufacturer, McGill AirClean is continually seeking ways to improve its products to better serve its customers. Therefore, all designs, specifications, and product features are subject to change without notice.

We can get you back on line quickly by supplying OEM replacement parts.

- Critical parts inventory
- Assurance of part compatibility
- Custom parts manufacturing
- Overnight delivery on many parts
- Fast, reliable service and repair
- On-line ordering capability

BENEFITS

- Faster, less hassle, and more accurate parts ordering
- Reduced down time
- Improved reliability
- Greater equipment efficiency

When considering the benefits and solid technical experience, it is easy to see why McGill AirClean is the best source for parts and service to keep your McGill air pollution control system functioning at peak performance.
